

Case study

Axpo Italia achieves 75% reporting time reduction using Brady's ETRM solution

Axpo Italia is a subsidiary of Axpo Group, Switzerland's largest producer of renewable energy and an international leader in energy trading. The company has been using Brady's Energy Trading and Risk Management (ETRM) solution since 2009.

Genoa based Axpo Italia is a major player in the Italian energy trading sector active OTC, IDEX futures and IPEX spot and gas markets. Their power assets are 100% renewables generated and the company is highly experienced in trading environmental certificates.

The mid office team at Axpo Italia relies on Brady's Energy Reporting Service (ERS) for daily profit

and loss reporting of their pan-European trading business. Brady's ERS supports the business intelligence needs of energy trading entities today. By working with existing BI tools, data trends can be identified with ease and management reporting demands can be met more efficiently.

ERS facilitates more informed decision-making by enabling highly granular analysis of trading performance and the creation customised reports. Detailed reports can be built using any popular reporting tools including Excel, Microsoft Power BI or Qlickview. Any raw data held within Brady's ETRM solution can be accessed for this purpose with ease.

"We are delighted to see the impact Brady's Energy Reporting Service has made on our business. Our mid office team has experienced around 80% reduction in manual tasks upon being operational with this solution. Before it took roughly 2.5 hours to run reports. Now we can run highly insightful reports in around 30 mins. Setting up jobs is quick and easy. We can now focus more on analysis work to provide the insights our traders need more efficiently."

Alessandro Vassalli -
Axpo Italia IT Trading Demand Manager

axpo

Key features

Enables the **access** and **reporting** of the following data types.
Values can be exported at a yearly, quarterly, monthly,
daily to 15 minute resolution:

Cash flow

Fees
